J. Biol. Chem. 273:33082-3309(1998).
-! FUNCTION: PHOSPHORYLATES PTDINS AND PTDINS4P WITH A PREFERENCE FOR PTDINS. DOES NOT PHOSPHORYLATE PTDINS (4,5)P2.
-! CATALYTIC ACTIVITY: ATP + 1-PHOSPHATIDY1-1D-MYO-INOSITOL = ADP + 1-PHOSPHATIDY1-1D-MYO-INOSITOL 3-PHOSPHATE.
-! SUBCELLULAR LOCATION: FOUND MOSTLY IN THE MICROSOME, BUT ALSO IN THE PLASMA MEMBRANE AND CYTOSOL.
-! TRESUE SPECIFICITY: WIDELY EXPRESSED, BUT LEVELS ARE HIGHEST IN THYMUS AND PLACENTA AND LOWEST IN PERIPHERAL BLOOD, SKELETAL MUSCLE AND KIDNEY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- SIMILARITY: BELONGS TO THE P13/P14-KINASES FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DOMAIN: SPECTRIN-LIKE PROTEINS HAVE FIVE DOMAINS:

(2) DOMAIN BETWEEN THE N-TERMINAL AND MIDDLE DOMAIN (NM),

(3) MIDDLE DOMAIN (M),

(4) DOMAIN BETWEEN THE MIDDLE AND C-TERMINAL DOMAIN (MC),

(5) C-TERMINAL DOMAIN (C),

NM AND MC DOMAINS ARE COMPOSED OF TYPICAL SPECTRIN 106 RESIDUES

NEEPERTS (1-8 FOR NM AND 12-19 FOR MC) AND ARE HOMOLGGOUS TO EACH

OTHER, N, M, AND C DOMAINS ARE COMPOSED OF SEQUENCES THAT DO NOT

PORM TYPICAL SPECTRIN REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MCMAIND. THE IT, MINDIGHAE TO THE TOTAL HOLD HOLD SEARCH STANDER TO THE TOTAL THE TOTAL TOTAL HOLD SEARCH STANDER TO THE CYTOSKELETAL SCIENCE 262:2027-2030(1993).

SCIENCE 262:2027-2030(1993).

POSTINE SECTRIN IS THE MAJOR CONSTITUENT OF THE CYTOSKELETAL METHORY BE LEAST METHORY TO THE ERYTHROCYTE PLASMA MEMBRANE. IT ASSOCIATES WITH BAND 4.1 AND ACTIN TO FORM THE CYTOSKELETAL SUPERSTRUCTURE OF THE ERYTHROCYTE PLASMA MEMBRANE. ESSENTIAL FOR LARVAL SURVIVAL AND DEVELOPMENT. STABILIZES CELL TO CELL INTERACTIONS THAT ARE CRITICAL FOR THE MAINTENANCE OF CELL SHAPE AND SUBCELLULAR ORGANIZATION WITHIN EMBRYONIC TISSUES.

C. I. SUBUNIT. NATIVE SPECTRIN MOLECULE IS A TETRAMER COMPOSED OF TWO ANTIPRAALLEL HETERODIMERS JOINED HEAD TO HEAD SO THAT EACH END OF THE NATIVE MOLECULE INCLUDES THE C-TERMINGS OF THE ALPHA SUBUNIT. INTERACTS WITH CALMODULIN IN A CALCIUM-DEPENDENT MANNER AND INTERACTS WITH F-ACTIN.

SUBCELLULAR LOCATION. NEAR THE INNER SURFACE OF THE PLASMA MEMBRANE OF NEARLY ALL CELLS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                between the Swiss Institute of Bioinformatics and the EMBL outstation —

-!- CATALYTIC ACTIVITY: AFP + A PROFEIN TYROSINE - ADP +
PROTEIN TYROSINE PHOSPHATE.
-!- SIMILARITY: CONTAINS 1 SH2 DOMAIN.
-!- SIMILARITY: CONTAINS 1 SH3 DOMAIN.
-!- SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALYTIC
DOMAIN. BELONGS TO THE SRC SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                Mus musculus (Mouse).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A58214
neutrophil cytosol factor 1 frameshift mutant - human
N;Alternate names: 47K autosomal chronic granulomatous disease protein; NCF-47K protein;
C;Species: Homo sapiens (man)
C;Species: Homo sapiens
R;Casimir, C.M.; Bu-Ghanim, H.N.; Rodaway, A.R.F.; Bentley, D.L.; Rowe, P.; Segal, A.W.
Proc. Natl. Acad. Sci. U.S.A. 88, 2753-2757, 1991
A;Title: Autosomal recessive chronic granulomatous disease caused by deletion at a dinucle A;Reference number: 159190; MUID:91187870
A;Accession: A58224
A;Molecule type: mRNA
A;Molecule type: Ranslation is not annotated in GenBank entry HUMPHOXE25, release 113.0
A;Accession: 179641
A;Status: translated from GB/EMBL/DDBJ
A;Accession: 75432 Annotation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŏ
                                                                                                                                                                                                                                                                                                                          ;
                                                                                                                                               The protein p47(phox) (AAR83825) interacts with protein p67(phox) in the NADPH oxidase complex via a C-terminal proline-rich region of p47(phox) binding to at least one C-terminal SH3 domain of p67(phox). The peptides AAR83814-24 were derived from the proline-rich region of p47(phox) and show inhibitory activity towards the binding of p47(phox) to p67(phox) as compared to the proline-rich region of a range of other proteins (AAR83826-30). The inhibitory peptides can be used for the treatment of chronic or acute inflammatory diseases e.g. septic shock, arthritis, asthma, adult respiratory distress syndrome, ischaemic heart

The present sequence is provided in a specification relating to the use of chemical shift data from nuclear magnetic resonance (NMR) and structural coordinate data of the PX domain of a protein to search for, evaluate, design and identify variant PX domain sequences for controlling the function of proteins containing the PX domain. It also relates to compounds promoting the binding of substances to the PX domain, and compounds inhibiting the binding of substances to the PX domain. The invention can be used in the identification of substances that can be used in the regulation of reduced nicotinamide adenine dinucleotide phosphate (NADPH) oxidase activity, which is involved in superoxide production in inflammatory response in disease or trauma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; antiinflammatory; protein coordinate data; chemical shift data; nuclear magnetic resonance; NMR structural coordinate data; PX domain; reduced nicotinamide adenine dinucleotide phosphate; NADPH; NADPH oxidase; superoxide production; inflammatory disease.
PX domain; reduced nicotinamide adenine dinucleotide phosphate; NADPH;
NADPH oxidase; superoxide production; inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 EAGAINPENRIIPHLPAPKWFDGQRAAENRQGTLTEYCSTLMSLPTKISRCPHLLDFFKV 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;
                                                                                                                                                                                                                                                                 The present sequence is provided in a specification relating to the use of chemical shift data from nuclear magnetic resonance (NMR) and structural coordinate data of the PX domain of a protein to search for, evaluate, design and identify variant PX domain sequences for controlling the function of proteins containing the PX domain. It also relates to compounds promoting the binding of substances to the PX domain, and compounds inhibiting the binding of substances to the PX domain. The invention can be used in the identification of substances that can be used in the regulation of reduced nicotinamica adenine dinucleotide phosphate (RADPH) oxidase activity, which is involved in superoxide production in inflammatory response in disease or trauma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 identification: cytostatic; cardioactive; neuroprotective; vulnerary; immunomodulatory; muscular; gynaecological; gastrointestinal; nephrotropic; antinfective; antibacterial; gene therapy; wound; neural disorder; immune system disorder; muscular disorder; reproductive disorder; gastrointestinal disorder; renal disorder;

AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB3234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polynoucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent disorders, reproductive disorders, immune system disorders, muscular disorders, reproductive disorders, immune system disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; antiinflammatory; protein coordinate data; chemical shift data; nuclear magnetic resonance; NMR; structural coordinate data; PX domain; reduced nicotinamide adenine dinucleotide phosphate; NADPH;

The present sequence is provided in a specification relating to the use of chemical shift data from nuclear magnetic resonance (NMR) and structural coordinate data of the PX domain of a protein to search for, evaluate, design and identify variant PX domain sequences for controlling the function of proteins containing the PX domain. It also relates to compounds promoting the binding of substances to the PX domain, and compounds inhibiting the binding of substances to the PX domain. The invention can be used in the identification of substances that can be used in the regulation of reduced nicotinamide adenihe dinucleotide phosphate (NADPH) oxidase activity, which is involved in superoxide production in inflammatory response in disease or trauma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           223 EPNYAGEPYYAIKAYTAVEGDEVSLLEGEAVEVIHKLLDG-W---KDDVTGYFPSMYLQK 278

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is provided in a specification relating to the use of chemical shift data from nuclear magnetic resonance (NMR) and structural coordinate data of the PX domain of a protein to search for, evaluate, design and identify variant PX domain sequences for controlling the function of proteins containing the PX domain. It also domain, and compounds promoting the binding of substances to the PX domain. The invention can be used in the identification of substances that can be used in the regulation of reduced nicotinamide adenine dinucleotide phosphate (NADPH) oxidase activity, which is involved in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; antiinflammatory; protein coordinate data; chemical shift data; nuclear magnetic resonance; NMR; structural coordinate data; PX domain; reduced nicotinamide adenine dinucleotide phosphate; NADPH; SH3 domain; NADPH oxidase; superoxide production; inflammatory disease.
NADPH oxidase; superoxide production; inflammatory disease; SH3 domain.

The invention relates to polynucleotides encoding novel human proteins or their active domains. The polypeptides, polynucleotides and antibodies raised against the polypeptides are used in a method of treatment of a mammal and prevention of disorders caused by the aberrant protein expression or activity. The polypeptides can be used as molecular weight markers, food supplements, and in antibody production. The polypeptides are used to identify compounds which bind to the polypeptides. Polynucleotides of the invention are used as probes and primers, for sequencing, for chromosome or gene mapping, in the production of recombinant proteins, and in generating anti-sense DNA or RNA and in gene therapy. Polypeptides of the invention can be used to target drugs to a tumour, in assays to determine biological activity, to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein levels, as tissue markers, and to isolate receptors or ligands. Oblypeptides of the invention may also be useful in treating platelet disorders, stem cell disorders, regenerating bone, cartilage, tendon, ligament and/or nerve tissue, wound healing, treating burns, promoting the proliferation, differentiation and survival of stem cells, as a contraceptive, treating osteoporosis and osteoarthritis, anamia, Alzhelmer's, Parkinson's and Huntington's diseases, amylotrophic lateral sclerosis, stroke, immune deficiencies resulting from bacterial, viral or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         raise antibodies/elicit an immune response, to determine quantitative
                                                                                                                                                                                                          Isolated polypeptides useful for treating anti-inflammatory diseases, nervous system disorders, and for regenerating bone and cartilage -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       fungal infection or from autoimmunity, cancer, allergy, asthma, graftversus.host disease, eczema, haemophilia, thrombosis, anti-inflammatory diseases, nervous system disorders, and infection. The present sequence represents a protein of the invention.
                                                                                                                                                                                                                                                                                         Example 4; Page 551-552; 894pp; English.

homology among known SH3 proteins. It has been found that small peptide RUs in multivalent form have reduced specificity for a given functional domain compared to monomer RUs. Multivalent RU complexes are particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAW05386-W05403 represent novel human and mouse Src-homology region 3 (SH3) domain containing proteins that can be used in the method of the invention. SH3 domain containing proteins play a role in signalling and structural elements of cells. The method of the invention is for identifying polypeptides containing functional domains of interest (especially SH3 domains). The method comprises contacting a multivalent recognition unit (RU) complex with a number of peptides and identifying polypeptides having a selective binding affinity for the RU complex. The method is based on functional similarities and does not rely on sequence similarities. Prior methods only gave limited success for identifying proteins which contain an SH3 domain due to the minimal sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              suited to screening for polypeptides containing functional domains that are similar to, but not identical in sequence to, the original target functional domain. The new method enables proteins having a common function to be identified. Identification of novel SH3 proteins will be useful for a better understanding of cell growth, malignancy, signal transduction processes, etc. New candidate drugs can be identified, and their specificities (e.g. pharmacological activities) can be assessed using the method of the invention.
                                                                             Src-homology region 3 domain; human; mouse; SH3 domain; cell growth; cellular signalling element; cellular structural element; mailgnancy; protein identification; functional domain; protein screening; cellular signal transduction process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    64 AINPENRIIPHLPAPKWFDGQRAAENRQGTLTEYCSTLMSLPTKISRCPHLLDFFKVRPD 123

The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antionvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rat; phosphodiesterase interacting protein; M14; PDE; CAMP-PDE; cyclic adenosine monophosphate phosphodiesterase; antiasthmatic; asthma; antiinflammatory; antipsoriatic; dermatological; antiasthritic; shock; analgesic; immunosuppressive; antiulcer; vasotropic; antiarthritic; antidabetic; urticaria; antiallergic; antiarteriosclerotic; diagnosis; antirheumatic; treatment; inflammatory disease; psoriasis; arthritis; atherosclerosis; Crohn's disease; cystic fibrosis; chronic bronchitis; eosinophilic granuloma; proliferative skin disease; ulcerative colitis; reperfusion injury; atopic dermatitis; diabetes insipidus; conjunctivitis; adult respiratory distress syndrome; allergic rhinitis; antirial restenosis; ankylosing spondylitis; transplant rejection;
pathological conditions associated with an ORFX-associated disorder. The
                               nucleic acids can be used to express ORFY proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal hæemoglobinuria, antlinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              112 PHLLDFFKVRP---DDLK--LPTDNQTKKPETYLMPKDGKSTATDITGPIILQTYRAIAN 166

The present sequence represents mouse Ese2. The present invention
specifically describes mammalian Esel and 2 proteins (1) and their splice
variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (1)
are involved in regulation of clathrin-mediated endocytosis (as a complex
with Esp15 protein), vesicular trafficking and actin cytoskeleton.
Comerally (1) for its (ant)agonists, mimetics, fragments and inactive
mutants); (1)-specific antibodies (Ab); sequences antisense to the (I)
polynucleotide; agents that downregulate expression of Ese genes or
antagonists of an Ese binding partner are used to treat diseases
associated with undesirable endocytosis and resulting changes in cellular
function. Particularly overexpression of Esel is used to block
clathrin-mediated endocytosis in vivo or in cell cultures, while
administration of (I) is used to promote endocytosis of selected cells.
(Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of
cells that can be stimulated to proliferate by a growth factor receptor;
and similar compounds (also inactive Ese mutants) can be used to prevent
viral infection. Endocytosis may also be regulated, in vivo or in cell
cultures, by forming an Ese Esp15 complex, then binding dynamin to the
complex. Generally conditions that can be treated include cancer;
complex. Generally conditions that can be treated include cancer;
complex selected electron or migration; viral infection; or abnormal
ceptor signalling, tissue development or synaptic transmission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      10;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention specifically describes mammalian Esel and 2
proteins (1) and their splice variants (Ese = EH-domain and SH3-domain
regulator of endocytosis). (1) are involved in regulation of clathrin-
mediated endocytosis (as a complex with Esp15 protein), vesicular
trafficking and actin cytoskeleton. Generally (1) (or its (ant)agonists,
minetics, fragments and inactive mutents). (1) specific antibodies (Ab);
confices antisense to the (1) polyuncleotide; agents that downregulate
expression of Ese genes or antagonists of an Ese binding partner are
cused to treat diseases associated with undesirable endocytosis and
resulting changes in cellular function. Particularly overexpression of
Esel is used to block clathrin-mediated endocytosis in vivo or in cell
cultures, while administration of (1) is used to promote endocytosis of
selected cells. (Ant)agonists of (1) or Ab are used to suppress abnormal
proliferation of cells that can be stimulated to proliferate by a growth
cused to prevent viral infection. Endocytosis may also be regulated, in
vivo or in cell cultures, by forming an Ese-Esp15 complex, then binding
dynamin to the complex. Generally conditions that can be treated include
cancer; abnormal cell division or migration; viral infection; or abnormal
receptor signalling, tissue development or synaptic transmission. The
present sequence represents mouse Esell protein sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10;

ANW05386-W05403 represent novel human and mouse Src-homology region 3

(5H3) domain containing proteins that can be used in the method of the invention. SH3 domain containing proteins play a role in signalling and structural elements of cells. The method of the invention is for identifying polypeptides containing functional domains of interest (especially SH3 domains). The method comprises contacting a multivalent correcognition unit (RN) complex with a number of peptides and indentifying polypeptides having a selective binding affinity for the RU complex. The method is based on functional similarities and does not rely on sequence similarities. Prior methods only gave limited success for identifying proteins which contain an SH3 domain due to the minimal sequence homology among known SH3 proteins. It has been found that small peptide main compared to monomer RUS. Multivalent for a given functional domains that are similar to, but not identical in sequence to, the original target functional domain. The new method enables proteins having a common function to be identified. Identification of novel SH3 proteins will be useful for a better understanding of cell growth, malignancy, signal transduction processes, etc. New candidate drugs can be identified, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cellular signaling element; cellular structural element; malignancy; protein identification; functional domain; protein screening; cellular signal transduction process.

The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (I) are involved in regulation of clathrin-mediated endocytosis (as a complex with Espl5 protein), vesicular trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); sequences antisense to the (I)

polynucleotide; agents that downregulate expression of Ese genes or antagonists of an Ese binding partner are used to treat diseases associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell complex. Benerally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal receptor signalling, tissue development or synaptic transmission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                966 pvrkstsidtgptespaslkrvaspaakpaipgeefiamytyesseqgdltfqqgdvivv 1025

The present invention specifically describes mammalian Esel and 2

Crequiator of endocytosis). (1) are involved in regulation of clathrin-
crequiator of endocytosis). (1) are involved in regulation of clathrin-
cmediated endocytosis (as a complex with Espl5 protein), vesicular
cmediated endocytosis (as a complex with Espl5 protein), vesicular
cmediated endocytosis (as a complex with Espl5 protein), vesicular
cmediated endocytosis (as a complex with Espl5 protein), vesicular
cmediated endocytosis (ab);
cccc trafficking and actin cytoskeleton. Generally (1) (or its (ant)agonists,
ccc and inserior can antagonists of an Ese binding partner are
ccc used to treat diseases associated with undesirable endocytosis and
cresulting changes in cellular function. Particularly overexpression of
csel is used to block clathrin-mediated endocytosis in vivo or in cell
ccc sells. (Ant)agonists of (1) or Ab are used to suppress abnormal
ccc activers, while administration of (1) is used to promote endocytosis of
collurars, while administration of (1) or Ab are used to suppress abnormal
ccc activers creeptor; and similar compounds (also inactive Ese mutants) can be
cused to prevent viral infection. Endocytosis may also be regulated, in
cused to prevent viral infection. Endocytosis may also be regulated, in
cused to complex. Generally conditions that can be treated include
cancer; abnormal cell division or migration; viral infection; or abnormal
cccpetor signalling, tissue development or synaptic transmission. The
cccpetor sequence represents mouse Esell protein sequence.
                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding Esel and 2 proteins, involved in regulation of endocytosis, used e.g. for treating cancer or preventing viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 14; Page 62-63; 99pp; English.
